EXPERIENCE

Oracle

Software Engineer I

Hyderabad, India

Jul. 2024 – Present

JavaScript, Node.js, REST APIs, SQL, React, Angular, Flask

- Migrated a legacy data export system to a parallelized processing model, handling **1M+ records** per run (~**200MB** payloads); reduced execution time from **~14 minutes** to **~2–5 minutes** (**60–80%+** improvement) and eliminated timeout failures under strict execution limits.
- Delivered a critical self-serve mapping workflow for a product serving **~2.3K eligible customers**, removing the need for implementation and support teams to handle mapping setup manually; shortened onboarding mapping turnaround from **~1 week** to **under 1 hour** and supported typical customer configurations involving **100+ mappings** with no hard system limit.
- Reverse-engineered external integration workflows and replicated them **via APIs**, implementing payload generation, transformation logic, conditional routing, and bidirectional mappings; decreased setup time for a **complex mapping** from **~20 minutes** to **~1–2 minutes** and for a **simple mapping** to **~30–40 seconds**.
- Improved inbound-shipment processing reliability by implementing a purchase-order sync workflow and fixing backend defects, lowering sync failures by **~80–90%** and stabilizing production usage across **1000+ customers**.

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript, Python, SQL

Frontend: React, Next.js, Angular, HTML/CSS

Backend & APIs: Node.js, Express.js, Flask, REST APIs

Databases: Oracle, MySQL, MongoDB

Tools & Platforms: Git, Docker, Postman, NetSuite, Salesforce

CS Fundamentals: Data Structures and Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering | **CGPA: 8.6/10.0**

Hyderabad, India

Nov. 2020 – Apr. 2024

PROJECTS

Durable Workflow Engine | Go, PostgreSQL, Redis Streams, React

[GitHub](#)

- Built a durable workflow engine starter with **3 application services**, an **8-service** local stack, **5 core workflow tables**, and **7 backend endpoints** for asynchronous job orchestration.
- Implemented and verified an end-to-end workflow execution path with **9 durable writes** across execution, task, attempt, and outbox state, using Postgres-first orchestration, Redis Streams dispatch, and live execution/task visibility.

Algorithm Visualizer | TypeScript, React, Data Structures & Algorithms

[GitHub](#) | [Live](#)

- Developed an interactive algorithm visualization tool with **7** sorting and pathfinding simulations, deterministic playback, **4-language** implementation references, and automated coverage for core logic.

CERTIFICATIONS & ACHIEVEMENTS

Diamond Certificate in Smart Coder (DSA) Program by Smart Interviews
