EXPERIENCE

Oracle

Software Engineer I

Hyderabad, India

Jul 2024 – May 2026

JavaScript, TypeScript, Node.js, Flask, REST APIs, SQL, React

- Migrated a legacy export pipeline to a queue-based parallel processing model with batching, retries, and failure isolation, reducing processing time for **1M+** record workloads (**~200MB/run**) from **~14 min** to **~2–5 min** and eliminating timeout failures.
- Delivered a self-serve mapping workflow for a product serving **~2.3K customers**, reducing end-to-end mapping setup turnaround from **1–2 weeks** to **under 1 hour** by replacing manual setup with productized configuration.
- Reverse-engineered legacy cross-system mapping behavior and built backend APIs for payload generation, transformation, conditional routing, and bidirectional mappings, reducing setup time by **~90–95%** from **~20 minutes** to **~1–2 minutes**.
- Improved reliability of the inbound-shipment sync feature for **1000+ customers** by adding purchase-order synchronization, retries, validation, and failure handling, reducing recurring production sync failures by **~80–90%** based on pre/post-release error trends.
- Fixed a release-critical sync issue during rollout by correcting transformation logic and adding invalid-mapping validation, unblocking deployment in **2 hours** and avoiding a **1-week** delay.

PROJECTS

DurableFlow | Fault-Tolerant Workflow Orchestration Engine

[GitHub](#)

Go, PostgreSQL, Redis Streams, React, TypeScript, Docker, OpenTelemetry, Prometheus, Grafana

- Built DurableFlow, a Go-based workflow engine for multi-step background jobs using PostgreSQL for durable state and Redis Streams for asynchronous dispatch.
- Implemented a transactional outbox, retries with backoff, dead-letter replay, consumer-group recovery, and handler-level idempotency for crash-safe execution under at-least-once delivery.
- Increased throughput by **~19x**, from **~5** to **~99 executions/sec** at **200 concurrent executions**, by tuning outbox polling from **2s** to **100ms**; sustained **~98 executions/sec** after partial worker failure.
- Added a React/TypeScript operations dashboard, Prometheus/Grafana/OpenTelemetry instrumentation, and **24 focused tests** for retry, replay, and recovery paths.

TECHNICAL SKILLS

Languages: C++, Python, Go, JavaScript

Backend: Node.js, Flask, REST APIs, Redis

Databases: PostgreSQL, MySQL, Oracle, MongoDB

Systems: Workflow Orchestration, Asynchronous Processing, Event-Driven Systems, Idempotency and Retry Handling

Tools: Git, Docker, OpenTelemetry, Prometheus, Grafana, Postman

Frontend: React, HTML/CSS

COMPETITIVE PROGRAMMING & ACHIEVEMENTS

Knight Badge on LeetCode | Max Contest Rating **1900+**, Top **3%**

[Link](#)

3-Star Coder on CodeChef (Competitive Programming) | DSA Rating **2000+**, Best Global Rank **3**

[Link](#)

3rd Place among **600 teams** in VNR VJIET Nationwide Coding Contest

[Link](#)

4th Place in **Megathon 2022** at IIIT Hyderabad, among **500 teams**

[Link](#)

Diamond Certificate in Smart Coder (DSA) Program by Smart Interviews

[Link](#)

EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering | **CGPA: 8.6/10.0**

Hyderabad, India

Nov 2020 – Apr 2024
