EXPERIENCE

Oracle

Software Engineer 1

Hyderabad, India

Jul 2024 – May 2026

JavaScript, TypeScript, Node.js, Flask, REST APIs, SQL, React

- Built a queue-driven parallel batch processor for a legacy export system with worker-based execution, batching, retries, and failure isolation, enabling concurrent execution of **1M+** record workloads (~**200MB/run**) while reducing runtime from **~14 minutes** to **~2–5 minutes** and eliminating timeout failures.
- Delivered a self-serve mapping workflow for a product serving **~2.3K customers**, eliminating manual setup by implementation and support teams and reducing support-dependent turnaround from **1–2 weeks** to **under 1 hour**.
- Reverse-engineered existing cross-system mapping workflows and implemented backend APIs for payload generation, transformation logic, conditional routing, and bidirectional mappings, decreasing setup time by **~90–95%** from **~20 minutes** to **~1–2 minutes**.
- Improved inbound-shipment sync reliability across **1000+ customers** by implementing purchase-order synchronization, validation logic, data-consistency checks, and failure handling, lowering production sync failures by **~80–90%**.
- Resolved **10+** high-priority release blockers and production issues across integration workflows, including a release-critical sync defect fixed in **2 hours** that prevented a **1-week** delay for a rollout affecting **1000+ customers**.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL

Backend: Node.js, Flask, REST APIs, Redis Streams

Databases: PostgreSQL, MySQL, Oracle, MongoDB

Frontend: React, HTML/CSS

Tools: Git, Docker, Postman

CS Fundamentals: Data Structures and Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

PROJECTS

DurableFlow | Fault-Tolerant Workflow Orchestration Engine

[GitHub](#)

Go, PostgreSQL, Redis Streams, React, TypeScript, Docker, OpenTelemetry, Prometheus, Grafana

- Built DurableFlow, a workflow engine in Go using PostgreSQL as the source of truth and Redis Streams for asynchronous task dispatch across API, worker, and dashboard services.
- Implemented a transactional outbox, durable retries with backoff, dead-letter replay, and Redis consumer-group recovery to make task dispatch and recovery crash-safe under at-least-once delivery.
- Added multi-step workflow chaining and handler-level idempotency with persisted reservations and cached responses to prevent duplicate side effects during replay and recovery.
- Developed a React/TypeScript operations dashboard and execution snapshot APIs to inspect task attempts, retry state, dead-lettered tasks, and replay flows end to end.

COMPETITIVE PROGRAMMING & ACHIEVEMENTS

3-Star Coder on CodeChef | **1900+** DSA Rating, Best Global Rank **8**

[Link](#)

Knight Badge on LeetCode | Max Contest Rating **1896**, Top **4.5%**

[Link](#)

3rd Place among **600 teams** in VNR VJIET Nationwide Coding Contest

[Link](#)

4th Place in **Megathon 2022** at IIIT Hyderabad, among **500 teams**

EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering | **CGPA: 8.6/10.0**

Hyderabad, India

Nov 2020 – Apr 2024
